

Vanshika Sethi | AI Product Manager
vanshi.sethi@yahoo.com | +1 8402397065 | [LinkedIn](#)

SUMMARY

AI Product Manager focused on developer-facing tools and human-agent collaboration, with 5+ years shipping AI-powered platform capabilities from RAG grounded assistants to evaluation frameworks that catch hallucinations before release. Skilled at translating engineering and data science tradeoffs (fine-tuned vs in-context learning, accuracy vs latency) into shippable product decisions, with hands-on Python fluency and an MBA in Business Analytics from UMass. Seeking to build the next generation of AI-assisted developer workflows.

WORK EXPERIENCE

AI Project Manager | Arcesium | 2023 - 2024

Led the development and launch of an AI-powered conversational assistant app, overseeing a team of 4 across product, engineering, and design. Collaborated with key stakeholders, including C-suite and marketing teams, to execute a digital go-to-market strategy, driving 10k+ impressions within a week.

- **LLM Agent & RAG Development:** Designed Evaluation criteria and a RAG-based grounding pipeline for an AI coding-and-conversational assistant, directly addressing the hallucination/accuracy problems central to AI-assisted developer tooling combining human review with automated checks before release, mirroring the guardrail patterns used in production coding assistants.
- **Evaluation Framework:** Defined an evaluation approach for response quality combining human review with automated accuracy checks to catch hallucinations and confidence issues before release.
- **User Research and Empathy:** Conducted extensive user research through 50+ interviews and surveys, identifying key pain points and aligning product features with user needs to enhance customer satisfaction and improve retention by 30%.
- **Stakeholder Management and Communication:** Collaborated with C-suite executives, engineers, and marketing teams to align product vision, ensuring cohesive communication across teams and securing buy-in for strategic product initiatives.
- **Project Management and Agile Methodologies:** Led cross-functional teams through Agile sprints, prioritizing features and managing timelines to deliver a high-impact product on schedule, improving overall team productivity by 25%.

AI Technical Product Manager | Target | 2020 – 2023

Led the development and launch of 9+ key features for a B2B employee communication platform, managing a cross-functional team of 40+ engineers, designers, and data scientists. Collaborated with executives and stakeholders, driving \$500k+ in sales and onboarding 5k+ users in the first quarter. Improved Weekly Active Users (WAU) by 40% through customer feedback, product iteration, and A/B testing.

- **Product Planning / Development / Launch:** Owned Product strategy for AI-assisted workflow tooling used by internal technical teams, evaluating fine-tuned vs in-context learning approaches with data scientists, the same accuracy/latency/cost trade-offs central to shipping reliable AI-powered developer tools.
- **Semantic Data & Knowledge Structure:** Contributed to entity-relationship and metadata design for platform data models, working with engineering to reduce ambiguity and improve consistency across downstream reporting and analytics consumers.
- **Evaluation & Guardrails:** Defined success metrics and evaluation criteria including accuracy, coverage, and human-in-the-loop review checkpoints for AI-assisted features prior to launch, in partnership with data science.
- **Cross Functional & Science Partnership:** Managed a team of 15+ engineers, designers, and data scientists, translated science and engineering trade-offs into shippable product requirements and acceptance criteria.
- **Global Launch & Partnerships:** Partnered with global payment providers to launch a new e-commerce solution across 9 APAC markets and piloted new use cases for mobile digital tipping with global hospitality brands.

Software Engineer Intern, Trust and Safety | Social Media Platform - Bangalore, KA | 2019

- **Product Development:** Launched the first 2FA security feature on the platform, increasing adoption by 29% (87+ million users).

Graduate Capstone Project | AI-Powered Anomaly Detection for Retail Transactions

University of Massachusetts Dartmouth — MBA Capstone | Team of 3 | 4 weeks

Built an LLM-based anomaly detection system for retail transaction data (Kaggle dataset), designing the detection logic, prompt/evaluation strategy, and validation approach hands-on in Python. Reduced false positive rate by 54% compared to baseline rule-based flagging, demonstrating the viability of LLM-assisted anomaly detection over traditional threshold methods.

- **Anomaly Detection & Model Design:** Hand-built and validated an LLM evaluation pipeline in Python prompt design, feature engineering, precision/false-positive analysis demonstrating the hands-on technical fluency (writes code, evaluates output quality) the role explicitly requires of its PM.
- **Evaluation & Iteration:** Built an evaluation framework to measure precision/false-positive rate, iterating on prompt design and feature inputs to cut false positives by 54%.
- **Technical Execution:** Implemented the pipeline in Python, handling data cleaning, feature preparation, and model output validation on a Kaggle retail transactions dataset.
- **Team Collaboration:** Worked in a 3-person team under a 4-week sprint timeline, dividing model development, evaluation, and write-up responsibilities.

EDUCATION

University of Massachusetts Dartmouth | 2024 – 2026

Masters in Business Administration (M.B.A): Business Analytics with a minor in Finance

University Institute of Engineering and Technology Kurukshetra | 2017 – 2021

Bachelors of Engineering: Electronics and Communication with a minor in Information Systems (Human-Computer Interaction Design)

Technical Skills

- **Product Tools:** Jira, Confluence, Figma, Miro, Aha, Notion
- **AI & Machine Learning:** LLMs, prompt engineering, model evaluation, model monitoring, model lifecycle oversight, vector search, embedding, feature definition
- **Data & Analytics:** SQL, Python, Pandas, NumPy, exploratory analysis, cohort analysis, KPI modeling, experimentation, A/B testing, dashboard interpretation
- **Cloud & APIs:** AWS, GCP, REST, APIs, microservices, authentication flows, basic CI/CD, event-driven workflows
- **User Research:** journey mapping, persona insights, problem discovery, qualitative interviews, usability reviews, feedback synthesis
- **Roadmapping & Prioritization:** OKRs, value scoring, dependency mapping, backlog refinement, sprint planning, release planning
- **AI Governance:** fairness checks, explainability practices, data quality review, privacy assessment, bias identification
- **Visualization:** Power BI, Tableau, dashboard building, metric tracking, insight storytelling
- **Product Strategy:** market scanning, competitive analysis, opportunity sizing, feature shipping, success criteria definition
- **Cross-Functional Collaboration:** engineering alignment, design coordination, stakeholder communication, requirement detailing, acceptance criteria creation

ADDITIONAL INFORMATION

- **Certificates:** Certified Digital Product Manager, Product Growth Series (Acquisition, Retention & Engagement, Monetization), ChatGPT Prompt Engineering
- **Skills & Tools:** B2B SaaS, Cross-platform Products, UI/UX Design, Applied AI/ML, Agile Methodology, Product Analytics, A/B Testing, JIRA, Notion, Zapier, Email Marketing, User Feedback Loop
- **Programming:** Python, Java, HTML, CSS, SQL, Swift, API
